

TheTube 2.9.5

Introduction

The Tube is the innovative and most modern TV solution for Mac users. With its TubeToGo webservice, The Tube lets you watch, manage and schedule recordings with your iPhone or iPod touch online on the go. The Tube is the only TV application with TubeTalk live-chat, live-stream (using iChat Theater) and a lot of other community features.

Changes in this Version

- NEW: Global scanning option. Scans all frequencies, regardless of your selected country
- NEW: Support for the new aluminum Apple remote
- Improved stability under Mac OS X 10.6.2
- Restores the iMovie and Apple TV export options
- The Tube will no longer automatically quit if you remove your TV device
- Over the air EPG updates are now delayed for 12 hours if you select "update later"
- Resolves an issue with Miglia Analog TV tuners
- The default volume setting is now louder

System Requirements

- Apple Macintosh with PowerPC G5, 1.6 GHz or faster, 512 MB RAM
- Recommended: Apple Macintosh with Intel processor, 1 GB RAM
- Min. 2 GB of free hard disk space
- Built-in USB 2.0 port
- Mac OS X 10.4 or higher
- Internet-Connection (required for activation, TubeTalk and EPG Feeds)
