

VPN Tracker 6.3

Introduction

VPN Tracker 6 is the new command center for working securely and remotely. With the new Secure Desktop, users now have access to all their most important applications, file servers, scripts and websites in one central location. VPN Tracker 6 supports 64 bit, IPv6 and unifies the latest security offerings with the most popular configuration methods from leading VPN gateway manufacturers.

Changes in this Version

- Modified network interface creation to match the new behavior of Mac OS X 10.7 Lion.
- Improved compatibility with the new user interface elements introduced by Mac OS X 10.7 Lion.
- Fixed a display issue in the export dialog on Mac OS X 10.7 Lion.
- Fixed VPN Availability Test results display issues on Mac OS X 10.7 Lion.
- Fixed reconnect issues upon network changes on Mac OS X 10.6 and 10.7.
- Fixed an issue with custom email text when creating deployment disk images.
- Added a workaround for an issue in Apple Mail when sending Technical Support Reports and Deployment Disk Images.
- Improved error messages for invalid ASN.1 distinguished name identifiers.
- Fixed a display bug that could cause additional remote networks not to be displayed.
- Fixed an issue with deploying from a VPN Tracker installation that was itself installed from a deployment disk image.
- Improved default settings for new LANCOM connections.
- Changed the XAUTH password caching behavior for SonicWALL Simple Client Provisioning connections to improve compatibility with RSA SecurID and other one-time passcode systems. The new behavior may cause the XAUTH password to be requested twice during initial setup if the SonicWALL is set to "Never cache" the XAUTH password.
- Improved error messages for a number of rare error conditions in VPN Tracker's back-end components.
- Fixed a rare crash in VPN Tracker's back-end components.
- Improved error messages during installation.

System Requirements

- Mac OS X 10.4 or higher
- Internet-connection
